

Digital Craftsmen™

Assess | Optimise | Manage | Improve

Slow websites kill sales. Our scan identifies bottlenecks in your code or web hosting with zero downtime.

How It Works

- 1** Provide your domain or URL for us to scan your website pages for bottlenecks
- 2** Digital Craftsmen will analyse your website performance report to provide an action list.
- 3** Working with your team, we'll **reduce load times by up to 70%** with minimal hassle.

Key Recommendations Include:

1. **Implement caching** to reduce the amount of times your website visitors have to load your website.
2. **Reduce HTTP requests** where page elements such as text, images and code are bundled together.
3. **Minify your code** to remove unnecessary spaces, comments, etc. especially with CSS and JavaScript.
4. **Implement a CDN network** to serve content closer to the user which significantly reduces latency.
5. **Enable compression** to reduce the overall file size by up to 80% and serving files quicker from the server.
6. **Identify unusually slow resources** like unoptimised images that may be creating bottlenecks for you.
